

One claim in, the right specialist recruited, a signed verdict out.

Cross-org, cross-framework claim adjudication on Band.

THE PROBLEM

Insurers do not employ the specialists they depend on.

Every property, injury, or legal claim waits on an outside expert reached by email.

CAUSE

Manual handoffs

Claims sit in a queue, then get emailed to an outside assessor with no shared context.

EFFECT

Slow and inconsistent

Decisions return days later. Different reviewers reach different calls on similar claims.

COST

Weak audit trail

Who decided what, and why, is reconstructed after the fact. Disputes and compliance suffer.

THE SOLUTION

One claim → the right specialist, a signed verdict.

HOW IT IS BUILT

Genuinely cross-framework, genuinely cross-org.

FRAMEWORKS

Three, one room

Pydantic AI, LangGraph, and CrewAI agents collaborate through Band adapters.

MODELS

Frontier + open

GPT-4o at the insurer (AI/ML API); Llama 3.1 at the specialists (Featherless).

RECORD

Band is the truth

Messages, task state, and a tamper-evident audit trail live in Band, not any one agent.

BUSINESS VALUE

A large, measurable market.

TAM

Claims operations spend

Loss-adjustment expense runs an estimated 10 to 12 percent of global P&C premiums, a multi-hundred-billion-dollar annual pool.

SAM

Digital-first carriers

P&C and health insurers and InsurTechs adopting agentic automation, an estimated multi-billion-dollar serviceable slice.

WEDGE

Cross-org adjudication

Claims that need an outside specialist: the slow, manual, high-value handoffs
ClaimArbiter automates first.

Revenue: Platform subscription · Usage pricing · Recruiting take-rate · Compliance add-on
